Lovely Professional University

Phagwara, Punjab (India)

1. Introduction

Media Network Solutions, a mid-sized enterprise, requires a structured and scalable network for its 7-floor office building. Each floor has 7 computers, and the company aims for efficient inter-department communication. This report details the network design, topology selection, IP addressing, routing strategies, and device placements.

2. Topology Selection

The network follows different topologies based on the floors to ensure fault tolerance and optimal performance:

Floors 1-2: Mesh Topology (High redundancy, improved fault tolerance)

Floors 3-4: Ring Topology (Cost-effective and simple routing)

Floors 5-7: Star Topology (Centralized management, better performance)

3. IP Addressing Scheme

The company follows a classful IP addressing scheme for different floor groups:

Floors 1-2: Class C Private (192.168.x.0/24)

Floors 3-4: Class B Private (172.16.x.0/24)

Floors 5-7: Class C Public (203.0.113.x/24)

Subnet Allocation

Floor	Network	Subnet Mask	Default Gateway
1	192.168.1.0	255.255.255.0	192.168.1.254
2	192.168.2.0	255.255.255.0	192.168.2.254
3	172.16.1.0	255.255.255.0	172.16.1.254
4	172.16.2.0	255.255.255.0	172.16.2.254
5	203.0.113.0	255.255.255.0	203.0.113.254
6	203.0.114.0	255.255.255.0	203.0.114.254
7	203.0.115.0	255.255.255.0	203.0.115.254

4. Router Configurations

Each router connects different floors and ensures smooth communication. The following configurations show the IP assignments and static routes.

Router A

Interface	IP Address
Gig0/0	192.168.1.254/24
Gig0/1	192.168.2.254/24
Gig0/2	10.0.1.1/30

Router B

Interface	IP Address
Gig0/0	172.16.1.254/24
Gig0/1	172.16.2.254/24
Gig0/2	10.0.2.1/30

Router C

Interface	IP Address
Gig0/0	203.0.113.254/24
Gig0/1	203.0.114.254/24
Gig0/2	203.0.115.254/24
Gig0/3	10.0.3.1/30

Router D

Interface	IP Address
Gig0/0	10.0.1.2/30
Gig0/1	10.0.2.2/30
Gig0/2	10.0.3.2/30

5. Routing Strategy

Static routing is implemented for inter-floor communication. Router D acts as the core router connecting all floor routers. The following static routes are configured:

Router A:

```
ip route 172.16.0.0 255.255.255.0 10.0.1.2  
ip route 203.0.113.0 255.255.255.0 10.0.1.2
```

Router B:

```
- ip route 192.168.0.0 255.255.255.0 10.0.2.2  
- ip route 203.0.113.0 255.255.255.0 10.0.2.2
```

Router C:

```
- ip route 192.168.0.0 255.255.255.0 10.0.3.2  
- ip route 172.16.0.0 255.255.255.0 10.0.3.2
```

Router D:

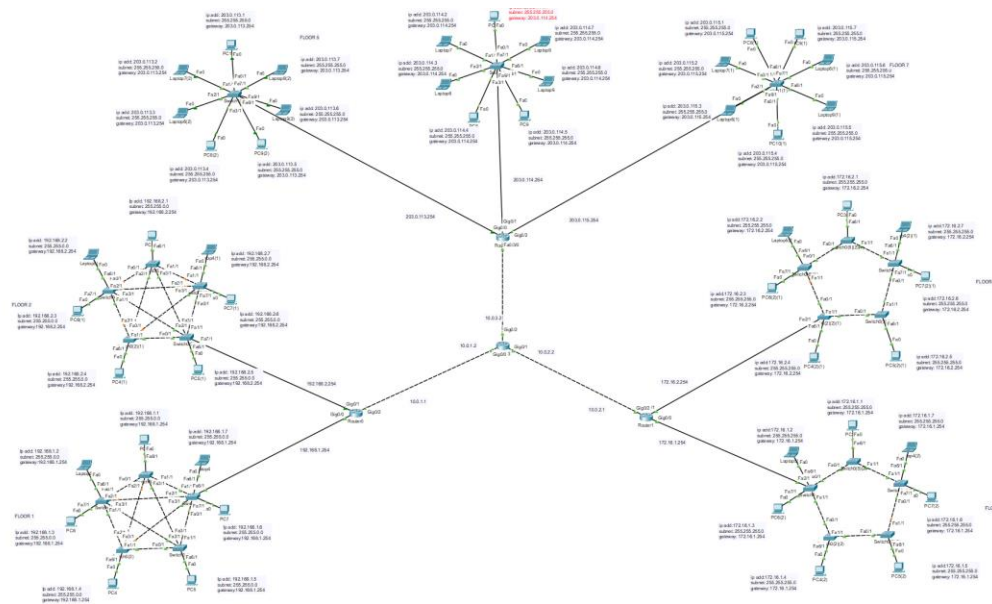

```
- ip route 192.168.1.0 255.255.255.0 10.0.1.1  
- ip route 192.168.2.0 255.255.255.0 10.0.1.1  
- ip route 172.16.1.0 255.255.255.0 10.0.2.1  
- ip route 172.16.2.0 255.255.255.0 10.0.2.1  
- ip route 203.0.113.0 255.255.255.0 10.0.3.1
```

6. Innovations & Scalability

The following innovations enhance the network:

- **Redundant links in Mesh topology for fault tolerance**
- **Efficient static routing reducing CPU load**
- **Scalable star topology for future expansion**

7. Deployment & Monitoring

**Total Number of Networks:**

- LAN Networks (One per floor): 7
- Point-to-Point Networks (Between routers): 3
- Total Networks: 10

Total Number of LANs:

- Each floor has 1 LAN.
- There are 7 floors.
- Total LANs: 7

Total Number of Default Gateways:

Each LAN has a unique default gateway (router interface IP) to handle outbound traffic.

- 1 per floor = 7 default gateways

Network Addresses & Subnetting:

Floor	Network Address	Subnet Mask	Default Gateway
1	192.168.1.0	255.255.255.0 (/24)	192.168.1.254
2	192.168.2.0	255.255.255.0 (/24)	192.168.2.254
3	172.16.1.0	255.255.255.0 (/24)	172.16.1.254
4	172.16.2.0	255.255.255.0 (/24)	172.16.2.254
5	203.0.113.0	255.255.255.0 (/24)	203.0.113.254
6	203.0.114.0	255.255.255.0 (/24)	203.0.114.254
7	203.0.115.0	255.255.255.0 (/24)	203.0.115.254

Routing tables

Router A

```
Router>show ip route
```

```
Codes: L - local, C - connected, S - static, R - RIP, M - mobile, B - BGP

Ping and Tracert

Ping and tracert from floor 1 to floor 4

The screenshot shows a Cisco Packet Tracer PC Command Line window for a device named 'Laptop5'. The window has tabs for 'Physical', 'Config', 'Desktop', 'Programming', and 'Attributes', with 'Desktop' selected. The command prompt shows the following output:

```
Cisco Packet Tracer PC Command Line 1.0
C:\>ping 172.16.2.4

Pinging 172.16.2.4 with 32 bytes of data:

Reply from 172.16.2.4: bytes=32 time<1ms TTL=125
Reply from 172.16.2.4: bytes=32 time<1ms TTL=125
Reply from 172.16.2.4: bytes=32 time<1ms TTL=125
Reply from 172.16.2.4: bytes=32 time<1ms TTL=125

Ping statistics for 172.16.2.4:
    Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),
    Approximate round trip times in milli-seconds:
        Minimum = 0ms, Maximum = 0ms, Average = 0ms

C:\>tracert 172.16.2.4

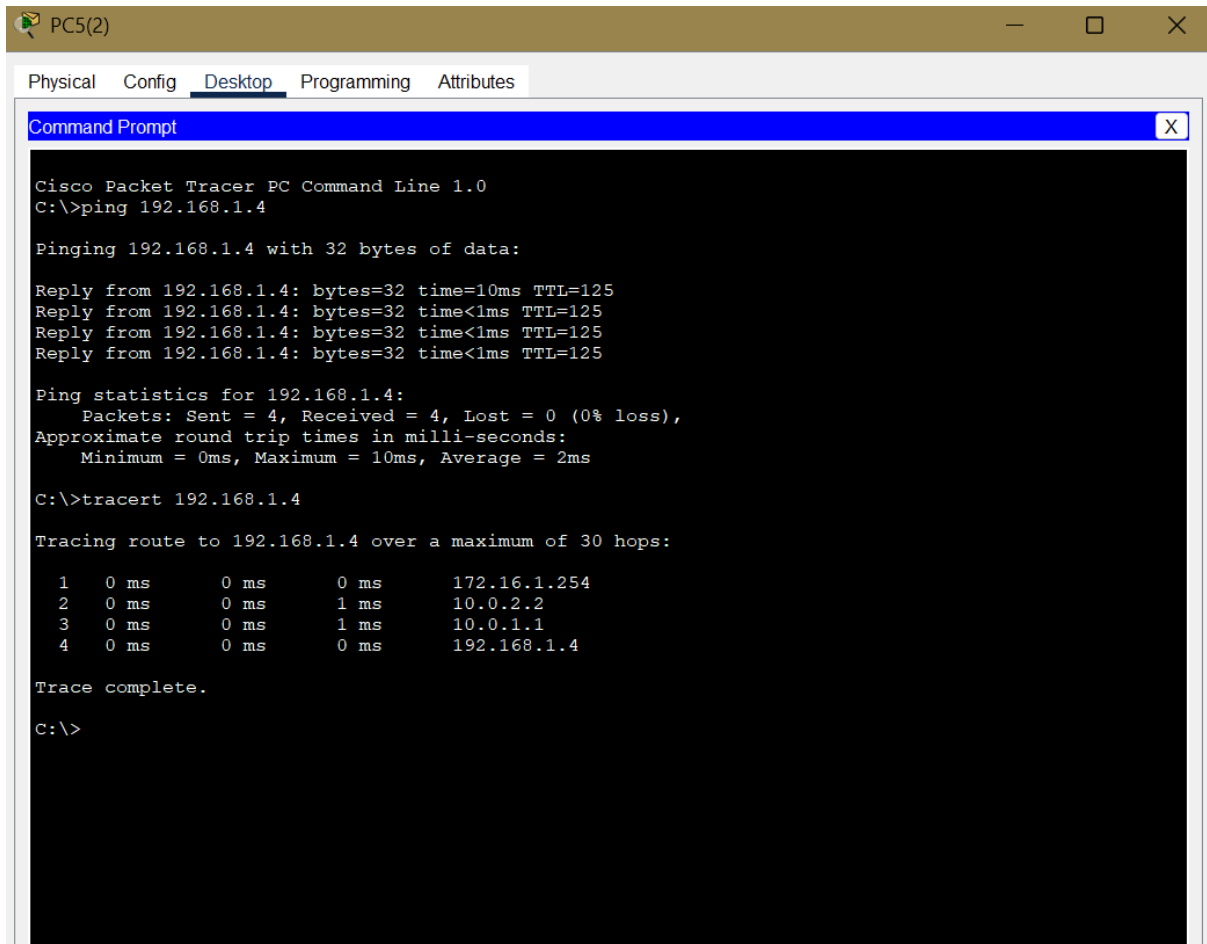

Tracing route to 172.16.2.4 over a maximum of 30 hops:

  1  5 ms      0 ms      0 ms      192.168.1.254
  2  0 ms      0 ms      37 ms     10.0.1.2
  3  0 ms      0 ms      0 ms      10.0.2.1
  4  0 ms      0 ms      0 ms      172.16.2.4

Trace complete.

C:\>
```

Ping and tracert from floor 3 to floor 1

The screenshot shows a Cisco Packet Tracer PC Command Line window for PC5(2). The window has tabs for Physical, Config, Desktop, Programming, and Attributes. The Desktop tab is active, displaying a Command Prompt window. The Command Prompt shows the results of a ping and a tracert command. The ping command is successful, showing four replies from 192.168.1.4 with 32 bytes of data, a time of 10ms, and a TTL of 125. The tracert command shows a route to 192.168.1.4 over a maximum of 30 hops, with four hops shown: 1 (0 ms, 0 ms, 0 ms, 172.16.1.254), 2 (0 ms, 0 ms, 1 ms, 10.0.2.2), 3 (0 ms, 0 ms, 1 ms, 10.0.1.1), and 4 (0 ms, 0 ms, 0 ms, 192.168.1.4). The trace is complete.

```
Cisco Packet Tracer PC Command Line 1.0
C:\>ping 192.168.1.4

Pinging 192.168.1.4 with 32 bytes of data:

Reply from 192.168.1.4: bytes=32 time=10ms TTL=125
Reply from 192.168.1.4: bytes=32 time<1ms TTL=125
Reply from 192.168.1.4: bytes=32 time<1ms TTL=125
Reply from 192.168.1.4: bytes=32 time<1ms TTL=125

Ping statistics for 192.168.1.4:
    Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),
    Approximate round trip times in milli-seconds:
        Minimum = 0ms, Maximum = 10ms, Average = 2ms

C:\>tracert 192.168.1.4

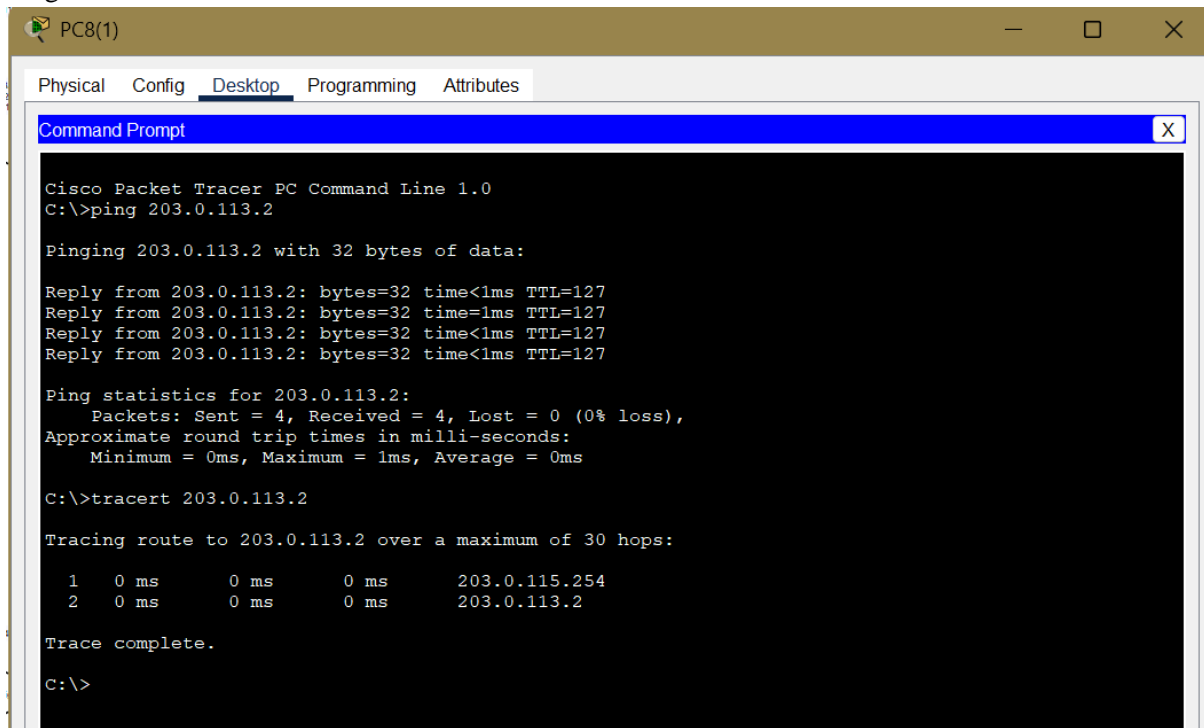

Tracing route to 192.168.1.4 over a maximum of 30 hops:

  1  0 ms    0 ms    0 ms    172.16.1.254
  2  0 ms    0 ms    1 ms    10.0.2.2
  3  0 ms    0 ms    1 ms    10.0.1.1
  4  0 ms    0 ms    0 ms    192.168.1.4

Trace complete.

C:\>
```

Ping and tracert from floor 7 to floor 5

The screenshot shows a Cisco Packet Tracer PC Command Line window for PC8(1). The window has tabs for Physical, Config, Desktop, Programming, and Attributes. The Desktop tab is active, showing a Command Prompt window. The Command Prompt displays the results of a ping and a tracert command to the IP address 203.0.113.2.

```
Cisco Packet Tracer PC Command Line 1.0
C:\>ping 203.0.113.2

Pinging 203.0.113.2 with 32 bytes of data:

Reply from 203.0.113.2: bytes=32 time<1ms TTL=127
Reply from 203.0.113.2: bytes=32 time=1ms TTL=127
Reply from 203.0.113.2: bytes=32 time<1ms TTL=127
Reply from 203.0.113.2: bytes=32 time<1ms TTL=127

Ping statistics for 203.0.113.2:
    Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),
    Approximate round trip times in milli-seconds:
        Minimum = 0ms, Maximum = 1ms, Average = 0ms

C:\>tracert 203.0.113.2

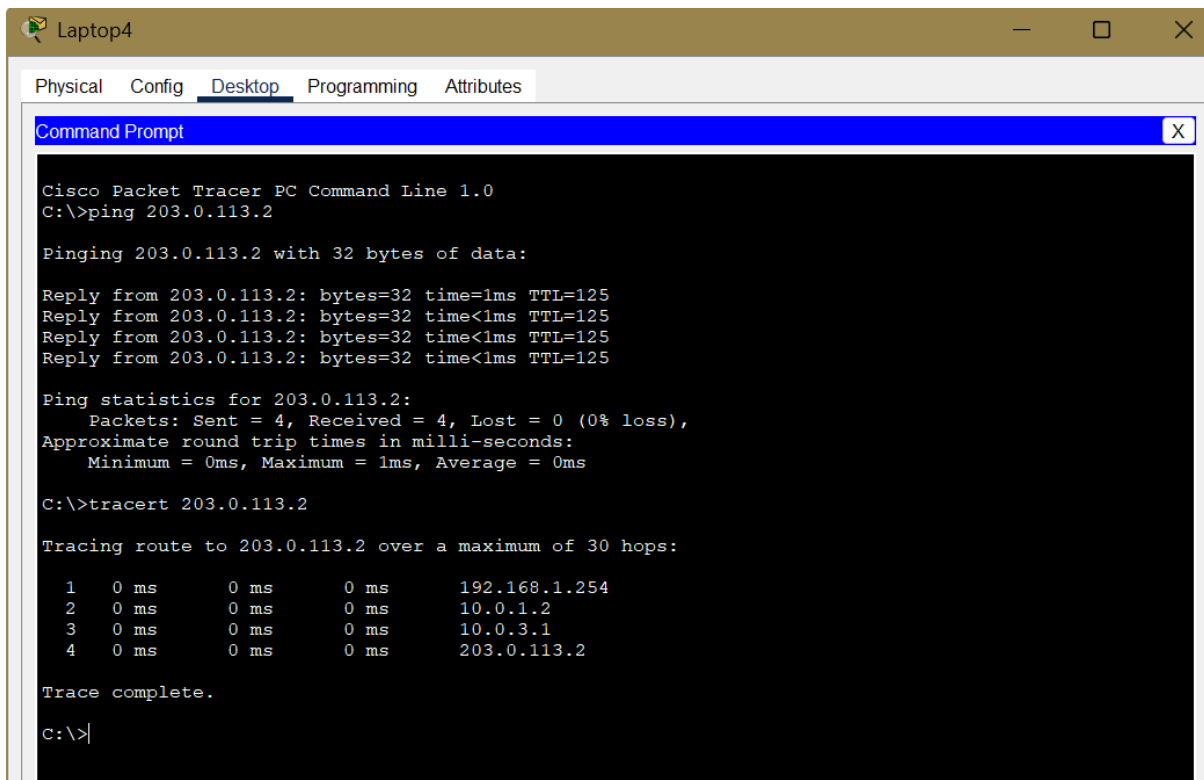

Tracing route to 203.0.113.2 over a maximum of 30 hops:

  1  0 ms    0 ms    0 ms    203.0.115.254
  2  0 ms    0 ms    0 ms    203.0.113.2

Trace complete.

C:\>
```

Ping and tracert from floor1 to floor 5

The screenshot shows a Cisco Packet Tracer Laptop Command Line window for Laptop4. The window has tabs for Physical, Config, Desktop, Programming, and Attributes. The Desktop tab is active, showing a Command Prompt window. The Command Prompt displays the results of a ping and a tracert command to the IP address 203.0.113.2.

```
Cisco Packet Tracer PC Command Line 1.0
C:\>ping 203.0.113.2

Pinging 203.0.113.2 with 32 bytes of data:

Reply from 203.0.113.2: bytes=32 time=1ms TTL=125
Reply from 203.0.113.2: bytes=32 time<1ms TTL=125
Reply from 203.0.113.2: bytes=32 time<1ms TTL=125
Reply from 203.0.113.2: bytes=32 time<1ms TTL=125

Ping statistics for 203.0.113.2:
    Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),
    Approximate round trip times in milli-seconds:
        Minimum = 0ms, Maximum = 1ms, Average = 0ms

C:\>tracert 203.0.113.2

Tracing route to 203.0.113.2 over a maximum of 30 hops:

  1  0 ms    0 ms    0 ms    192.168.1.254
  2  0 ms    0 ms    0 ms    10.0.1.2
  3  0 ms    0 ms    0 ms    10.0.3.1

```

8. GitHub Repository

The full project (including configs, diagrams, and documentation) is uploaded to GitHub for tracking and collaboration.

<https://github.com/Aare007/CSE-307.git>

9. Conclusion

This structured network design ensures efficient, scalable, and fault-tolerant communication within Media Network Solutions. The mix of topologies, optimized IP addressing, and static routing provides a cost-effective yet reliable solution for the enterprise.
